Alchemy GGPP Product Bulletin

Alchemy GGPP (Glycol Gel Pipeline Pig) is a solid gel pig which can be used, at temperatures of less than 30°C, to pig out lines and create temporary barriers for pipelines.

The gel pig is manufactured in a canister which is sized for the internal diameter of the pipeline. The pig and former are delivered to the pipeline site where the gel pig is inserted into the pipeline. The pig can be propelled with water, methanol, monoethylene glycol or gas.

At the end of the pipeline the pig can be physically removed or sent to the production stream where it will melt with heat. This type of pig is also used to create sections of liquids within pipelines.

Alchemy GGPP is resistant to biodegradation and so is ideally suited to projects where the time scale of deployment is not assured.

The product is normally stable for up to 6 months if kept sealed in its original packaging and kept cool.

Alchemy GGPP is made in various diameters and lengths to suit pipeline requirements.

Canisters for application can be fabricated from mild steel, coated mild steel or stainless steel and can be pressure rated and flange matched depending on application requirements and client's specifications.

Physical Properties

State	Solid below 30°C
Melting Point	30°C
Colour	Yellow/Gold
Specific Gravity	Approx. 1.2
pH	6 -7

Additional Information

Alchemy GGPP is approved by CEFAS for use in UK, Norway and Netherlands.
